

PREMIUM SAFETY AND ANTI-MAR FASTENER DRIVE TOOLS

APEX[®]
μ-Guard[™]

TOOLimpex
CZECH REPUBLIC s.r.o.

The Global Leader in Enhancing Operator Safety on the Assembly Line

Apex[®] μ-Guard™ free-spinning covered drive tools increase operator safety by significantly reducing or eliminating pinch points when operators are wearing gloves.

Apex μ-Guard provides a protective barrier between genuine Apex fastener tools and your finely finished workpiece, thereby delivering the proven Apex performance plus the best protection available against in-system damage. The free-spinning design provides maximum protection for polished and highly sensitive surfaces.

Apex has solutions for all aspects of safety on an assembly line when it comes to fastener drive tools. In addition to our line of Covered Bits, Bit Holders, Sockets, Extensions, and Universal Swivel Wrenches, we also offer μ-Guard Gap Covers that will eliminate the gap between a socket and an extension or between the right-angle power tool and a socket / extension.

The Apex μ-Guard line of Covered Drive Tools has evolved into the tool of choice for enhancing operator safety in almost all leading assembly plants.

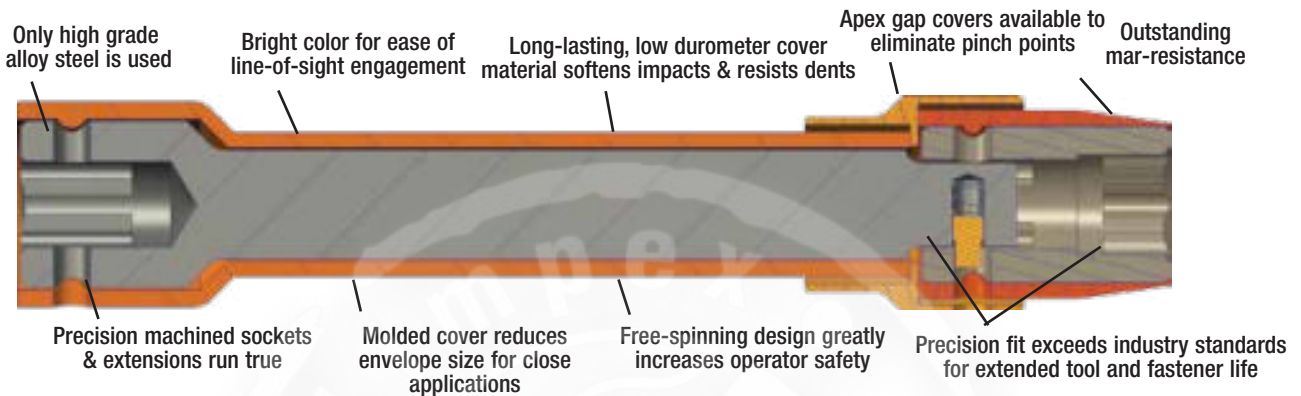

Apex μ-Guard Advantage

- Increased operator safety
- Reduced in-system damage and marring
- Enhanced plant productivity
- Free-spinning design for improved ergonomics and safety
- Superior durability leading to significantly lower cost of ownership

THINK SAFETY THINK APEX μ -GUARD!

Why Apex μ -Guard UGS Molded Covered Drive Tools?

Apex μ -Guard UGS Molded Covered Tools

Over the past decade, the **Apex μ -Guard UGS Series** of molded covered tools have been rapidly adopted by leading aerospace, appliance, automotive and heavy equipment assembly plants around the world. These tools allow the drive tool to spin freely inside of the covers, significantly reducing or eliminating contact from the rotating tool during a fastening operation. In addition to improving operator safety, these tools help minimize in-system damage and marring caused during fastening.

The Cover Story

- Low durometer, Thermoplastic Urethane (TPU Elastomer) material that resists dents during incidental side impacts.
- Absorbs side impacts and does not produce raised burrs when impacted.
- Molded to the tool for reduced envelope dimensions yet still able to exhibit “free-spinning” capability for improved operator safety and ergonomics.
- Cover is non-removable to prevent unwanted tampering on the line.
- Low sustained coefficient of friction between the cover and the tool produces minimal loss of tool efficiency.
- Signature orange color makes fastener contact easier and station monitoring smoother.
- Part numbers are clearly marked for ease of identification.

Apex has the engineering capability, manufacturing prowess, and supply network to meet the global requirements of today's market place.

UNPARALLELED PRODUCT QUALITY UNMATCHED PRODUCT RANGE

Apex μ -Guard UGH Machined Covered Tools

The **Apex μ -Guard UGH Series** of high durometer covered tools are machined for tight tolerances. Made from a high-performance engineered thermoplastic material, these free-spinning covered tools offer a thin protective cover for tight clearance applications. μ -Guard UGH tools can be configured to suit a unique customer application where a standard μ -Guard UGS tool may not be available.

Custom Solutions for your Specific Needs

If you have a unique covered drive tool need, one of our applications specialists or your local Apex Sales Representative will work with you to determine the most suitable solution for your particular needs.

Quality Apex Tools Under the Cover

- Apex fastener drive tools are made from tool grade alloy steel and then machined for a precision fit that exceeds industry standards.
- Tools are heat treated using our proprietary process for the proper hardness based on the application. Not too brittle to break nor too soft to wear out after one shift.
- Apex tools run true with minimal wobble for more efficient fastening cycles. Improper fit can lead to premature fastener and fastener tool failure.

LEADING INNOVATOR IN FASTENER DRIVE TOOLS

SELECT CASE STUDIES

BODY ASSEMBLY

PROBLEM: Customer expressed safety concerns due to snagging of operators' gloves while guiding a Tap.

APEX SOLUTION:

- Developed a covered tap holder that includes a spring-loaded non-marring sleeve which covers all of the Tap except the tip

BENEFIT TO CUSTOMER:

- Increased operator safety since the cover prevents gloves from getting trapped
- Improved plant productivity due to significant reduction in safety incidents

INTERIOR COMPONENT ASSEMBLY

PROBLEM: Customer needed a quick release chuck with a free spinning cover to improve operator safety and reduce marring.

APEX SOLUTION:

- Developed a free-spinning, covered driver that allows the user to activate the quick-release feature

BENEFIT TO CUSTOMER:

- Customer can change-out power drive bits quickly
- Anti-mar cover replaces typical knurled surface without compromising functionality
- Free-spinning design significantly improves operator safety

FINAL ASSEMBLY - VARIOUS APPLICATIONS

PROBLEM: A standard Universal Swivel Wrench with a 30 degree angle failed to deliver the required torque. Customer also required a covered tool for reduced marring.

APEX SOLUTION:

- Developed a covered Universal Swivel Wrench that provides a 20 degree angle

BENEFIT TO CUSTOMER:

- Custom tool is providing the required torque
- Socket & shank are covered with a free-spinning orange cover - enhancing safety and anti-mar protection

Apex μ-Guard Socket Gap Covers

Apex μ-Guard Socket Gap Covers are specifically designed to eliminate the gap between a socket and an extension or between a right-angle power tool and a socket / extension.

Covering this gap prevents an operator's gloves or hair entrapment during fastening operations.

Use of the free-spinning μ-Guard Socket Gap Covers can further enhance plant and operator safety by helping minimize fastening tool related injuries on the assembly line.

Features and Benefits

- Increased safety by covering the pinch points
- Improved productivity by reducing lost time to injuries and recordable incidents
- Reusable for a new set of tools
- Superior durability - generally outlast the free-spinning tools that they are covering
- Easy to install via a pin-lock mechanism
- Robust, free-spinning design

APEX FASTENING TOOLS

The global leader in industrial fastener drive tools, Apex is revolutionizing the market for covered assembly tools with its broad, and continuously evolving, line of premium safety and anti-mar covered fastener drive tools.
